Facility Use

Church facility

Description

Worship center, classrooms, and administrative offices

Completion

120 days

Modular
Construction

With a rapidly growing congregation in Texas' fastest-growing city, the First Baptist Church of Frisco required three new buildings to meet an expected demand of 1,100 new members. Ramtech installed a total of 23,386 square feet using relocatable modular buildings. The new facilities include a middle school student worship center with a 13 foot vaulted ceiling and 12 fellowship classrooms. The other two facilities include an adult education building with a fellowship area, and an administrative office complex with 14 private offices and an adjacent administrative support area for the ministry staff. A HardiePanel exterior with a stucco finish was used to match the masonry finishes on the existing structures. Ramtech managed all of the site preparation including the extension and connection of utilities, while also providing the canopies, steps, ramps, and landings for each building.
